โปรแกรมการตรวจสุขภาพพนักงาน

the 1990s, the number of people in the world who are under 15 years of age is expected to increase by 1.5 billion (United Nations 1994).

There is a growing awareness of the need to address the needs of children in the 1990s. The United Nations Children's Fund (UNICEF) has been instrumental in this regard, and has produced a series of reports on the state of the world's children (UNICEF 1990, 1991, 1992, 1993, 1994). The 1994 report, *The State of the World's Children 1994*, contains a chapter on children in the 1990s, which sets out a number of key issues for the future. The chapter is divided into four sections: 'The World's Children in the 1990s', 'The World's Children in the 1990s: A Summary', 'The World's Children in the 1990s: A Summary', and 'The World's Children in the 1990s: A Summary'.

The first section, 'The World's Children in the 1990s', discusses the demographic changes that are taking place in the world. It notes that the number of children under 15 years of age is expected to increase by 1.5 billion by the year 2000. This increase is due to a combination of factors, including a decline in infant mortality rates, a decline in the age at which women have their first child, and a decline in the age at which women have their second child. The second section, 'The World's Children in the 1990s: A Summary', provides a summary of the key issues for the future.

The third section, 'The World's Children in the 1990s: A Summary', discusses the key issues for the future. It notes that the number of children under 15 years of age is expected to increase by 1.5 billion by the year 2000. This increase is due to a combination of factors, including a decline in infant mortality rates, a decline in the age at which women have their first child, and a decline in the age at which women have their second child. The fourth section, 'The World's Children in the 1990s: A Summary', provides a summary of the key issues for the future.

The fifth section, 'The World's Children in the 1990s: A Summary', discusses the key issues for the future. It notes that the number of children under 15 years of age is expected to increase by 1.5 billion by the year 2000. This increase is due to a combination of factors, including a decline in infant mortality rates, a decline in the age at which women have their first child, and a decline in the age at which women have their second child. The sixth section, 'The World's Children in the 1990s: A Summary', provides a summary of the key issues for the future.

The seventh section, 'The World's Children in the 1990s: A Summary', discusses the key issues for the future. It notes that the number of children under 15 years of age is expected to increase by 1.5 billion by the year 2000. This increase is due to a combination of factors, including a decline in infant mortality rates, a decline in the age at which women have their first child, and a decline in the age at which women have their second child. The eighth section, 'The World's Children in the 1990s: A Summary', provides a summary of the key issues for the future.

The ninth section, 'The World's Children in the 1990s: A Summary', discusses the key issues for the future. It notes that the number of children under 15 years of age is expected to increase by 1.5 billion by the year 2000. This increase is due to a combination of factors, including a decline in infant mortality rates, a decline in the age at which women have their first child, and a decline in the age at which women have their second child. The tenth section, 'The World's Children in the 1990s: A Summary', provides a summary of the key issues for the future.
